

OPD Payment-Gated Queue

Receptionist View-Only Guide

Version: 3.0 | Date: July 2026

1. End-to-end workflow

```
Patient arrives
-> Reception sends to OPD Billing
-> Registration (if needed)
-> Appointment created
-> Payment completed (opd_visits.payment_status = paid)
-> System auto-creates patient_queue row
-> Receptionist dashboard shows patient (view only)
-> Doctor GET /queue/today shows patient
```

2. Role responsibilities

- OPD Billing: register, create appointment, collect payment
- System: enqueue after payment (queue_enqueue_service.py)
- Receptionist: view queue only - no billing, no queue creation
- Doctor: consult, request-next, start/complete

3. Eligibility (receptionist sees only)

- Appointment exists and status is not cancelled
- Linked opd_visits.payment_status = paid
- patient_queue row exists (auto-created after payment)
- Unpaid (pending/partial) patients are NOT shown

4. OPD APIs that trigger enqueue

- POST /opd/patient/register - pay now at register
- POST /opd/visit - optional appointment_id for pre-booked
- POST /opd/visit/{visit_id}/pay - pay later then auto-enqueue

5. Receptionist APIs (view only)

- GET /receptionist/dashboard
- GET /receptionist/today-queue
- GET /receptionist/doctor-queue/{doctor_id}
- GET /receptionist/queue-history

6. Key code files

- Services/queue_enqueue_service.py
- Services/opd_service.py
- Services/receptionist_service.py
- Models/patient.py - OpdVisit.appointment_id

SaffoCare HMS - Receptionist & Queue Workflow

- alembic f6a7b8c9d0e1 - migration

7. Deployment

- Run: alembic upgrade head
- Run: python seed.py
- Re-login receptionist and doctor users
